Technical Description:

This leather is a natural grain and the thickness is from 1.4-1.6 mm. The principal characteristic of this leather is the soft hand and light grease touch even if the hide is a slightly buffed in ordinary process with light protection, to keep medium performance. Thanks to the kind of tanning and fattening process, you can feel the touch like natural leather. On article dream it is visible some characteristics like, healed scars, some vein and insect bites. The difference in grain is acceptable everywhere, because it's natural.
