

The Universe of Natuzzi Leathers

Cat. 15 LE MANS "Protecta"

Intro. Date: Jan 2000

Origins : non-European Cattle

Thickness : 1,1 - 1,3 mm.

Hand : Soft

Appearance : Matte

Breathability : Good

Color resistance to wear and tear : Low

Color resistance to light : Low

Natural Markings : Frequent

1 Buffed Grain YES

2 Full Grain YES

3 Natural Grain

4 Embossed Grain

5 Stain Resistance

6 Spotting or Mottling

7 Color Variations YES

8 Splits Available

Finishing : Semi-Aniline, Slightly Protected

Technical Description:

This article has a very light translucent finish for color and it is full-grain leather, but not natural (means that the grain was not buffed as it is with most protected leathers) The thickness is from 1.1 - 1.3 mm. Because the hide comes from the Southern Hemisphere, after dyeing the color range is quite broad. The translucent or see through finish that is applied narrows the color range that can be expected in this leather. This leather will still vary from dye lot to dye lot and within a dye lot. Its main characteristics are the extremely soft hand being slightly buffed, less "natural signs" such as wrinkles, flat grain, insect bites, etc. are visible
